DETAILED ACTION

Response to Arguments

Applicant's arguments with respect to claims 1-18 are have been considered but are moot in view of the new ground(s) of rejection.

Double Patenting

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Claims 1-18 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-15 of U.S. Patent No. 6205009. Although the conflicting claims are not identical, they are not patentably distinct from each other.

As to Claim 1, U.S. Patent No. 6205009 discloses in claims 1, 3, 4 and 6: a method comprising the step of summing the voltages (obtaining a sum); determine a difference between a current value (first filter output) of the summed voltage value to a reference value (second filter output); and if absolute value (determining an absolute

Art Unit: 2829

value) of difference exceeds a freeze threshold (a threshold), then maintaining a reference value constant (a fixed value).

Claim 2 is suggested by claims 6 of U.S. Patent No. 6205009.

Claim 3 is suggested by claim 5 of U.S. Patent No. 6205009.

Claim 4 is suggested by claims 3 and 4 of U.S. Patent No. 6205009.

Claim 5 is suggested by claim 1 of U.S. Patent No. 6205009.

As to Claims 6 and 15, U.S. Patent No. 6205009 discloses in claims 9, 11 and 12: an apparatus comprising: a short term filter (a first filter); a long term filter (a second filter); and a summer (a summer).

Claim 7 is suggested by claim 1 of U.S. Patent No. 6205009.

Claim 8 is suggested by claim 14 of U.S. Patent No. 6205009.

Claim 9 is suggested by claim 9 of U.S. Patent No. 6205009.

Claim 10 is suggested by claim 15 of U.S. Patent No. 6205009.

Claim 11 is suggested by claim 6 of U.S. Patent No. 6205009.

Claim 12 is suggested by claim 11 of U.S. Patent No. 6205009.

Claims 13 and 18 are suggested by claim 13 of U.S. Patent No. 6205009.

Claim 14 is suggested by claims 11 and 12 of U.S. Patent No. 6205009.

Claims 16 and 17 are suggested by claim 11 of U.S. Patent No. 6205009.

Please note that the recitation detecting fault in a transducer including a secondary winding having at least two voltages in has not been given patentable weight because the recitation occurs in the preamble. A preamble is generally not accorded

Art Unit: 2829

any patentable weight where it merely recites the purpose of a process or the intended use of a structure, and where the body of the claim does not depend on the preamble for completeness but, instead, the process steps or structural limitations are able to stand alone. See *In re Hirao*, 535 F.2d 67, 190 USPQ 15 (CCPA 1976) and *Kropa v. Robie*, 187 F.2d 150, 152, 88 USPQ 478, 481 (CCPA 1951).
